Source History

```java
62              }
63
64          }
65
66          private static float calculateAverage(float addition, float[] average, int i) {
67
68              addition = (addition + average[i]);
69              float prom = addition / 3;
70              return prom;
71          }
72
73          private static int calculateSum(int sum, int[] add, int i) {
74              sum = sum + add[i];
75              return sum;
76          }
77
```

Output - AcostaDomenicaExam2 (run-single)

```
please enter the number you want to sum 2 -> 1
please enter the number you want to sum 3 -> 1
please enter the number you want to sum 4 -> 1
please enter the number you want to sum 5 -> 1
The total sum is equal to 5

---------CALCULATE AVERAGE---------
please enter the number you want to calculate the average 1 ->
```
